Rayyan Waqar

Team Members Introduction

1. Rayyan Waqar

Rayyan is a dedicated Computer Science student with a strong interest in software engineering and collaborative system development. He demonstrates leadership, problem-solving, and organizational skills while contributing to project planning, coordination, and implementation. He is passionate about developing efficient software solutions and continuously enhancing his technical and analytical abilities.

2. Aaiz Ur Rehman Kazmi

Aaiz is a dedicated Computer Science student with strong interests in programming, artificial intelligence, and problem-solving. He actively works on C++ development, data

structures, and algorithmic challenges to strengthen his technical skills. Passionate about continuous learning, he aims to build innovative solutions and pursue a successful career in technology and research.

3. Aleena Imran

Aleena is a dedicated software developer with a strong foundation in software design and development. She specializes in writing efficient, reliable code and creating intuitive UI designs to ensure system performance, usability, and stability. She is committed to delivering high-quality software solutions that meet user and business requirements.

Roles and Responsibilities

Rayyan Waqar:

- Scrum Master
- Product Owner
- Developer

Aaiz ur Rehman Kazmi

- Tester
- Requirement Analyst/Architect
- Developer

Aleena Imran

- UI Designer
- Developer

Team Agreement

Methods of Communication

The team will primarily communicate through WhatsApp group chat for daily coordination and quick discussions. Formal updates and important files will be shared via email. Urgent matters may be discussed through phone calls when immediate response is required. GitHub will be used for technical communication related to code.

Communication Response Time

Team members are expected to respond:

- **WhatsApp messages:** within 2-4 hours
- **Email messages:** within 24 hours

If a member is unavailable, they must inform the team beforehand.

Meeting Attendance

The team will meet twice per week. All meetings are mandatory unless a valid reason is communicated in advance. Missing members must review meeting notes afterward.

Running Meetings

Meetings will be conducted both face-to-face at university and online via Google Meet when necessary.

The Scrum Master will lead meetings, and one assigned member will record meeting minutes and share them with the team.

Meeting Preparation

Each member must come prepared with:

- Progress updates
- Completed tasks
- Questions or issues faced

Preparation ensures meetings remain short and productive.

Version Control

GitHub will be used for version control.

Only tested and working code will be committed.

Temporary or incomplete files will not be uploaded.

Commit messages must clearly describe changes (e.g., “Added login validation feature”).

Each member will work on separate branches before merging.

Division of Work

Work will be divided according to assigned roles and individual strengths. The Project Manager and Scrum Master will coordinate task distribution after team discussion.

Stakeholders include:

- System users (business staff/admin)
- Project team members
- Course instructor (client/evaluator).

Submitting Assignments

All deliverables will be finalized one day before the deadline.

The Team Lead will submit assignments after review by all members. Every member must verify the final document before submission.

Contingency Planning

If a member drops out, remaining tasks will be redistributed among the team.

Members who repeatedly miss meetings will receive a warning and tasks may be reassigned.

Any academic dishonesty will be reported to the instructor and that member’s contribution will be removed from the project.
